[Start of transcript.](#) [Skip to the end.](#)

In the past two lessons we've been looking at HTML, a way of structuring or organizing the content of our Web pages.

We saw the HTML pages or HTML documents consist of elements and

those elements are delineated or indicated using tags.

Here are the important HTML tags that we saw in the previous lesson.

Using those HTML tags we were able to create a web page

Notes:

- The HTML for the example shown at the end of the lesson is available [here](#). You can right-click the link and save it to your computer so that you can view it locally.
- In the table shown at 3:37, we use "#012345" as an example value for the background-color attribute. This is a way of representing color using "hexadecimal notation" for the red, green, and blue values that comprise the color. More information is available at https://www.w3schools.com/html/html_colors.asp
