Quiz 2.10

[Bookmark this page](#)

Problem 1

1/1 point (graded)

What HTML elements are selected with the jQuery command `$("select[name='id']")` ?

- ☐ All elements with the name “id” that are children of `<select>` elements.
- ☒ All `<select>` elements that have the name “id”. ✓
- ☐ All elements with the name “id”.
- ☐ All elements in the class “id”.

Answer

Correct:
This notation allows us to select HTML elements but also specify their attributes; here, we’re selecting `<select>` elements but also specifying that we want the ones with the “name” attribute set to the value “id”.

Show Answer

✓ Correct (1/1 point)

Problem 2

1/1 point (graded)

In jQuery, the selector `$(this)` refers to:

- ☒ A specific element that was selected as part of a group of elements. ✓
- ☐ All elements that were selected as part of a group of elements.
- ☐ The current HTML page.
- ☐ All elements in the HTML page.

Answer

Correct:
Depending on the selector, we may choose many elements in a page, and any specified callback function will be applied to each element that is selected. In order to access each individual element in the callback function, we use `$(this)` within the function.
