Quiz 1.5

[Bookmark this page](#)

Problem 1

1 point possible (graded)

The HTML “style” attribute allows us to:

- ☐ Define a new HTML tag.
- ☐ Specify the location of the HTML element within the page.
- ☐ Specify the appearance of the HTML element.
- ☐ Indicate that an HTML element should only be rendered depending on the user’s actions.

Submit

You have used 0 of 3 attempts

Problem 2

1 point possible (graded)

The difference between an HTML “class” and “id” is that:

- ☐ An HTML element can belong to many classes but only have one id.
- ☐ Multiple HTML elements can belong to the same class but each id must be unique.
- ☐ Every HTML element belongs to at least one class but does not have to have an id.
- ☐ Nothing, they’re the same thing!

Submit
