Problem 1

1/1 point (graded)

The command `document.getElementsByClassName('something')` is equivalent to which of the following jQuery commands?

☐ `$ ('something')`

☒ `$ ('.something')` ✔

☐ `$ ('#something')`

☐ `$ ('class:something')`

Answer

Correct: To access a class in jQuery, use the “dot” notation as you would in CSS.

Problem 2

1/1 point (graded)

I have a variable `mySpan` that refers to an HTML element. Which of the following jQuery commands is equivalent to `mySpan.innerHTML = 'hello';` ?

☐ `mySpan = 'hello';`

☐ `mySpan.innerHTML('hello');`

☐ `mySpan.html () = 'hello';`

☒ `mySpan.html ('hello');` ✔

Answer

Correct: Using jQuery, the `html` function allows us to modify an HTML element’s contents.
