Problem 1

1/1 point (graded)

Which of the following will generate a list that appears as follows?

1. Apples
 - Granny Smith
 - Red Delicious
2. Bananas
 - 1. Yellow
 - 2. Green

```
<ol>
<li>Apples</li>
<ul>
<li>Granny Smith</li>
<li>Red Delicious</li>
</ul>
<li>Bananas</li>
<ol>
<li>Yellow</li>
<li>Green</li>
</ol>
</ol>
```

```
<ol>
<li>Apples</li>
<ol>
<li>Granny Smith</li>
<li>Red Delicious</li>
</ol>
<li>Bananas</li>
<ol>
<li>Yellow</li>
<li>Green</li>
</ol>
</ol>
```

```
<ol>
<li>Apples</li>
<li>Bananas</li>
<ul>
<li>Granny Smith</li>
<li>Red Delicious</li>
</ul>
<ol>
<li>Yellow</li>
<li>Green</li>
</ol>
</ol>
```

```
<ol>
<li>Apples</li>
<ul>
<li>Granny Smith</li>
<li>Red Delicious</li>
</ul>
<li>Bananas</li>
<ul>
<li>Yellow</li>
<li>Green</li>
</ul>
</ol>
```

Answer
Correct! The outer list is ordered. The list beneath “Apples” is unordered, and then the list beneath “Bananas” is ordered.

Problem 2

1/1 point (graded)

In an HTML form, the difference between a radio button and a check box is that:

The user may choose only one option from a group of radio buttons, but may choose many options from a group of check boxes. 

The user may choose only one option from a group of check boxes, but may choose many options from a group of radio buttons.

When a check box is selected, all other check boxes are unselected, but this is not the case with radio buttons.

The only difference is their appearance.

Answer
Correct: Radio button elements are grouped using their “name” attribute and the user can only choose one value for that name.
